## Dur 6 PTA Powder

| CATEGORY           | Metal Powders   |  |  |  |
|--------------------|---|--|--|--|
| ТҮРЕ               | Gas atomized spherical Cobalt-Chromium-Tungsten alloy.  |  |  |  |
| APPLICATIONS       | Outstanding alloy against abrasion, thermo-shock and corrosion combined with high temperatures. Dur 6 PTA<br>Powder is the most widely used of the wear resistant cobalt based alloys and exhibits good all-round<br>performance. It is regarded as the industry standard for general-purpose wear resistance applications.   |  |  |  |
| PROPERTIES         | The alloy deposit can be machined with tungsten tool tips and by grinding. The hardness of the deposit will degrease 16% at 300°C and about 30% at 600°C. Excellent alloy against thermal shock, abrasion, erosion, corrosion and cavitation at high temperature and excellent resistance to many forms of mechanical and chemical degradation over a wide temperature range, and retains a reasonable level of hardness up to 500°C (930°F). |  |  |  |
| SUITABLE FOR       | Examples include valve seats and gates; pump shafts and bearings, erosion shields and rolling couples. It is often used self-mated.   |  |  |  |
