

HK-9DC

- Small volume, light weight, and easy for movement and installation.
- Low gravitational center design, adopting electromagnet, and free from the phenomenon of demagnetization caused by high temperature of welding.
- Can conduct welding in both left and right directions, with both ends installed with the route sensing switch, which can make the trolley stop automatically upon ending of welding.
- Possessing the function of arc welding, and improving the quality of welding line of arc.
- Widely applied to ship, bridge, engine, petrochemical complex, and steel structure work, etc.
